

KEISER CARDIO

M3i TOTAL BODY TRAINER

Model 5512

PERFORMANCE IN REAL TIME

The M3i Total Body Trainer came about because our athletic customers needed a bike with an upper body component that would hold up to the rigors of athletic performance. We designed a bike built on the sound platform of the proven M3i. The M3i TBT is perfect for those seeking a full body workout, allowing them to train upper and lower body at the same time or independently, or even perform single limb rehabilitative movements. Keiser Integrated Technology allows the coach to monitor each athlete's performance while on the bike in real time on a smartphone or tablet and retain the data to monitor progress.
